TREE PLANTERS' NOTES

A Publication for Nurserymen and Planters
of Forests and Shelterbelts

CONTENTS:

ANNUAL PLANTING REPORT - 1954
FOREST TREE NURSERIES OF THE U. S. - 1954

U. S. DEPARTMENT OF AGRICULTURE
FOREST SERVICE
WASHINGTON 25, D. C.

TREE PLANTERS' NOTES NO. 19

This issue of Tree Planters' Notes gives the record of the Nation's forest and shelterbelt planting work in fiscal year 1954 and a copy of a list or directory of the year's forest tree nurseries. These are enclosed in this jacket, separately bound so that they may be put with the similar reports of previous years if you care to do so. They are titled:

Forest and Shelterbelt Planting in the United States During 1954

The situation in general
Statistics by states and agencies doing planting
Quantities of stock produced

Forest Tree Nurseries in the United States — 1954

Location and ownership
Name of resident nurseryman
Production in fiscal year 1954

The sources and limitations of the data are set forth in the two reports themselves. We urge that any errors, omissions, or suggestions for improvement in the data be called to our attention.

**FOREST AND SHELTERBELT PLANTING
IN THE UNITED STATES**

during

1954

(July 1, 1953 – June 30, 1954)

The situation in general
Statistics by states and agencies doing planting
Quantities of stock produced

(Compiled from information furnished by the State Foresters or other appropriate public officials of each State and Federal agency concerned)

FOREST AND SHELTERBELT PLANTING IN THE UNITED STATES
DURING 1954

Acres planted, 1954 and previously

Forest and shelterbelt planting during the fiscal year 1954 (July 1, 1953 to June 30, 1954) as reported by the State Foresters and other agencies, amounted to 811,066 acres, an increase of 95,518 acres or 13 per cent above 1953. Comparable figures of the past few years are:

1954 - 811,066 acres	1951 - 456,368 acres
1953 - 715,548 "	1950 - 497,507 "
1952 - 522,935 "	1949 - 347,918 "

In 6 years the Nation's rate of planting has increased 133 percent. This is, of course, a remarkable thing and many people can justifiably be proud of their part in it. However, such "total" statistics give a somewhat distorted picture of the true situation. In the planting report of 1953 the statement was made that "when the details of the year's work are considered separately, many reasons can be found for either 'pointing with pride' or 'viewing with alarm'." This situation continues. The record area planted is an impressive fact, and in a few States the sizes of the planting programs are something undreamed of a few years ago. But the counterbalancing facts are that more than half of all the States show no increase over 1953 or are even reducing their private- and State-land planting programs. Many States have programs extremely small in relation to the areas needing windbreaks or reforestation. The current annual rate of planting is hardly more than 1 per cent of the total area needing planting, even if no allowance is made for planting failures or pre-mature harvest.

Accomplishments in 1954 by ownership classes are as follows:

The Federal Government planted 72,980 acres of the land in its custody, a decrease of 4,632 acres from those planted in 1953. This decrease is mostly due to less planting on Atomic Energy Commission lands; the plantings on the National Forests and other Federal lands increased very slightly or remained nearly unchanged.

The States and other non-Federal public agencies planted 50,711 acres, a decrease of 13,080 acres. This decrease occurred because 10,000 fewer acres were planted on State Forests and 3,000 fewer on other State lands. In justice to some of the States

that reduced their State land planting, it must be pointed out that they did so to get trees for orders from private land planters. There was little change in the amount of county and municipal planting.

Private landowners of the 48 States, Hawaii, and Puerto Rico, planted 687,338 acres, an increase of 113,193 acres—about 21 per cent—over 1953.

In nineteen of the States the private land planting increased 145,600 acres above that of 1953.

In thirteen of the States the private land planting was approximately the same as that of 1953.

In eighteen of the States the private land planting decreased a total of 37,000 acres. Four of these States, however, (Alabama, Arkansas, Louisiana, and Oregon) usually have extensive programs but this year their activities were curtailed due to a scarcity of seed or planting stock. Therefore, the decrease for these States, at least, is temporary.

A new milestone has been achieved in the history of American reforestation. For the first time, States have reported the reforestation of 100,000 acres during a single year. This accomplishment was achieved by both Florida and Georgia in 1954. Florida reported 100,660 private acres, 3,470 State acres, and 2,500 Federal acres planted; Georgia reported 100,989 private acres, 948 State acres, and 1,527 Federal acres planted. In contrast 20 years ago (1935) Florida reported 147 acres reforested and Georgia 75 acres. Ten years ago (1945) Florida reported, 5,542 acres planted and Georgia 7,000 acres.

Other States planting extensively in 1954 were:

Louisiana - - - 68,124 acres	Michigan - - - 38,707 acres
Mississippi - - - 65,295 "	New York - - - 37,297 "
Pennsylvania - - 42,900 "	Alabama - - - 35,587 "
South Carolina - 41,761 "	

In these 9 States together there were planted 539,765 acres. This acreage is two-thirds of all that was done in the 48 States, Hawaii, and Puerto Rico.

This concentration of two-thirds of all planting in just nine States emphasizes how small is the amount of planting being done in some of the

others. A few of the arid States of the West, of course, have relatively little opportunity for successful reforestation, but many others have great needs and very small programs. The problem facing the national program is to help increase the planting in all States to a point proportionate to the reforestation and shelterbelt needs in those States.

Especially noteworthy is the amount of reforestation being done by industrial organizations on their own lands. The forest industries planted more than a quarter million acres of their lands in 1954, and other industries planted 44,000 acres, States where industries were especially active in planting were:

Alabama -----	17,400	acres	North Carolina- - -	7,100	acres
Arkansas -----	9,300	"	Oregon -----	5,100	"
Florida -----	61,900	"	Pennsylvania - - - -	18,500	"
Georgia -----	49,800	"	South Carolina - - -	15,200	"
Louisiana -----	50,500	"	Texas -----	15,200	"
Mississippi - - - -	22,100	"	Washington -----	10,400	"

The amount of land being planted by the forest and other industries combined is 45 per cent of the private land planted.

Nurseries—numbers, operators, and outputs

A tabulation of the forest tree nursery facilities in the Nation during 1954 follows:

Agency or owner	Active nurseries	Actual or estimated output of trees
U. S. Forest Service	12	77,382,000
Soil Conservation Service	8	31,700,000
Tennessee Valley Authority	2	20,000,000
State Foresters or similar	93	502,171,000
Cities and counties	2	166,000
Soil Conservation Districts	5	5,585,000
Paper industries	11	45,600,000
Lumber industries	4	9,312,000
Private commercial	36	55,000,000
TOTAL	173	746,916,000

See Table 5 in this report for additional details.

With the close of the 1953 production year, the SCS ceased tree production at 4 of its nurseries, leaving but 8 in operation, and at the close of the 1954 production year the Service also ceased to operate these and its grass and herbaceous plant nurseries. Henceforth, most of these nurseries will be operated by local governmental agencies and will appear in future lists under the agency headings.

Expansion of total output by the State nurseries continues. Two new State nurseries began production during 1954, bringing the total active producers to 93. Their combined output was about 66 million plants greater than in 1953. Two States are building new nurseries, and five other States have important expansion or improvement programs underway. There are also six other State nurseries which produce only shrubs and other plants for wildlife cover plantings, and one forestry college nursery which is considered a part of a nearby State Forester's nursery.

During 1954 a paper company and a sawmill company constructed new nurseries. There are now 15 forest industry nurseries in active production and two more are under way.

Thirteen States reported serious shortages of planting stock in 1954, and three reported surpluses. Presumably the others were reasonably close to meeting their current demand. There was the customary sale and trading of surplus supplies among the States, and at least one asked its planters whose land was near the boundary of an adjacent State to send their orders directly to that State which had a surplus. Since New Mexico and Nevada do not conduct programs of their own, Colorado continued to make trees available for a few orders from New Mexico, and Utah continued to fill Nevada's orders.

ROLAND ROTTY, In Charge
Tree Planting Cooperation

¹This list was compiled from reports by the operating agencies (as the State Foresters) or from direct correspondence with the nursery. Omissions and corrections should be reported to the Chief, USFS, Washington 25, D*C.

² One additional nursery is inactive.

³ With the close of the 1954 production year the SCS ceased to operate these 8 tree nurseries and also their grass and herbaceous plant nurseries. Henceforth most of these nurseries will be operated by local governmental agencies and will appear in future lists under those headings. A ninth SCS nursery (Ohio) produced some SCS stock but was transferred to the State later in the year and is shown as a State nursery.

⁴ The TVA also had an experimental nursery producing no forest tree stock.

5- Of these 93 nurseries 91 produced stock in 1954, and 2 were being established. Not included in this summary are 6 which produce only shrubs and plants for wildlife cover plantings, and 1 forestry college nursery which is considered as a part of a nearby state forester's nursery. Of these 91 tree producing nurseries 83 were under the C-M 4 cooperative tree distribution program.

⁶ In addition to these 11 nurseries, one more was being established.

⁷ In addition to these 4 nurseries, one more was being established.

⁸ Estimate.

FOREST-TREE NURSERIES IN THE UNITED STATES IN 1954

(Each nursery's name is indented so as to place its initial letter in the column for its class of ownership)

Invitation

All persons who work in reforestation, or who are interested in it or some allied field are invited to send in material for publication in Tree Planters' Notes. If their material is not yet in final form for publication, they are invited to at least send a letter to Tree Planters' Notes and tell what they are doing and what manner of information should be published. Beautifully typed articles of flawless grammar are not required, although such would not be rejected. Manuscripts written in lead pencil during noon hour are acceptable if that is what it takes to get an account of what has been done. The address is: Chief, Forest Service, U. S. Department of Agriculture, Washington 25, D. C.

Subscriptions and Mailing List

Tree Planters' Notes will be sent upon request to persons and organizations doing reforestation work, and to libraries, forest schools, and similar appropriate places. The address is given above.
