# TREE PLANTERS' NOTES

FOR PLANTERS OF FORESTS AND SHELTERBELTS AND FOR NURSERYMEN

## 1966 SEED AND PLANTING STOCK DEALERS

A Directory of Commercial Dealers in  
Seeds and Planting Stock for  
Common Trees and Shrubs

This is a directory of American dealers in the more common forest and shelterbelt plants. The names of dealers in the less common plants and horticultural varieties can be found in:

Plant Buyers Guide, 6th Edition  
Massachusetts Horticultural Society  
Boston, Massachusetts

An international list of dealers entitled "Forest Seed Directory" is published by the Food and Agriculture Organization (FAO) of the United Nations. It is available for \$2.00 from:

Columbia University Press  
International Documents Service  
2960 Broadway  
New York, New York 20025

The information in this directory has been compiled from data furnished by the dealers which responded to a letter sent to all commercial dealers of which the Forest Service of the United States Department of Agriculture and the State Foresters had a record. It is published for the convenience of seed and planting stock buyers. Endorsement of the dealer or his products is not intended and must not be inferred.

### Geographic Origin of Seed

Most of the dealers of seed and plants in this Directory of Commercial Dealers in Seeds and Planting Stock for Common Trees and Shrubs will, upon request, furnish data on seed origin for the seeds and plants they sell.

Research in this country and other countries has proven the general superiority of forest and shelterbelt plantings made with planting stock from seed of local origin which is seed from an area subject to similar climatic influence usually within 100 miles of the planting site and differing in elevation by less than 1,000 feet.

If seed or planting stock from seed of local origin is not available, the best second choice would be that from a region having a length of growing season, day length, maximum and minimum growing season temperatures, rainfall amount and distributions and other environmental factors comparable to those at the planned planting area.

This sample form is suggested for convenience in obtaining data, on seed origin and quality. A seed collector or dealer would usually be unable to provide all the listed information for every seed lot. He should be encouraged to provide as detailed and complete information as possible. This information will be of increasing value at a later time when certain planted trees have proven superior qualities that can be traced to their seed source.
