

## **A Random Walk Through the History of Breeding for Wood Quality**

J. P. Van Buijtenen<sup>1</sup> and T. D. Byram<sup>2</sup>

The walk begins by accompanying Bruce Zobel on a trip visiting a number of pulp and paper mills in East Texas in search of wood quality and ends up hopelessly lost in a maze of micro-arrays.

In between we will be visiting seed orchards, the Tappi Forest Biology Committee, the clonal forests of the future, the nation's sanitary landfills, and other interesting landmarks. The choice and order of topics is subject to change without notice.
